To the Valued Customers of Ceramic Magnetics, Inc.:

I am pleased to announce National Magnetics Group, Inc.'s (NMG) acquisition of Ceramic Magnetics, Inc. (CMI) from Thomas & Skinner, Inc. effective 1/5/15. NMG ([www.magneticsgroup.com](http://www.magneticsgroup.com)), with production facilities in Bethlehem, PA, offers a diverse product line including soft ferrites, powdered iron cores, ceramic magnets, microwave ferrites, dielectric materials and other advanced ceramic materials.. We have an outstanding reputation for fulfilling customer requirements from custom shapes in low volume to standard shapes in high volume.

CMI, currently located in NJ, is the premier supplier of high quality soft ferrites since its incorporation in 1965. CMI is the recognized leader in the areas of special sizes and shapes with superior and unique magnetic properties.

This acquisition completes the most diverse fully integrated ceramic manufacturing company in the industry. We offer a vast range of materials, forming processes and part sizes. This has been achieved through previous acquisitions of product lines and related businesses including Ferronics, Inc., Ceramic Powders, Inc. and TCI Ceramics, Inc. Our goal is to provide one comprehensive organization to meet all of your application needs.

We look forward to continuing CMI's relationship with you while becoming your 'go to' resource for ferrite solutions. Please contact us if you have any questions.

Yours sincerely,

Paul B. Oberbeck  
President
